Quality Assurance

To ensure the quality of the project we must make sure the quality meets these requirements:

- Make sure GANTT chart is always up to date.
- Flowchart should change with the production of the program to keep it consistent with the ideal design
- Communication should be done through Slack and use Trello to keep track what needs to be done and what needs to be worked on.
- A document should be created to showcase the Legal, Social, Ethical and Professional Issues that the company follows.
- The program should be set at a standard and should be able to do:
  - Allows users to accept a terms and conditions agreement as soon as the program has run.
  - After the user agrees to the terms of condition, they should be able to login as an admin but cannot login as any other type of user.
  - Once the admin has logged into the system, they should be able to add, edit or remove payroll entries.
  - They should also be able to view current entries into the database.
  - They should also be able to exit the program at any point.
- To keep the other teams updated on our progress with our part of the project we will host a 20-minute seminar to at the end of each phase.
- At the end of the project we must test all parts of the program to make sure it has met the standards above.
